

Intro to iLife

Beginner OS X Course

Tuition: \$49

1 Hour Workshop

Intro to iLife covers three great software applications: iPhoto, iMovie and iDVD. iPhoto makes managing your photos easy. It helps you organize your photos so you can find them fast, edit them to look their best and share them with your friends and family. With iMovie, put together a few video clips or fine-tune every edit or just flip through clips. iMovie lets you do it all—and then share it all. With iDVD, you can premiere your movies and photo slideshows on a professional-quality DVD with animated menus, buttons, scene selection and more.

PREREQUISITES: *Intro to Mac or Mac OS X Basics or equivalent knowledge.*

WHO SHOULD ATTEND: *This class is for anyone who is looking for an introduction to the iLife Suite.*

Topic	Description
iPhoto	Get started with iPhoto. iPhoto makes managing your photos easy and helps you organize your photos so you can find them fast. You will be introduced to all the great editing tools to help them look their best. Then, don't forget to share them with your friends and family!
iMovie	Making a movie doesn't have to be a large production. See how it easy it can be to throw together a few video clips of your precious memories and then premiere your movie online or by burning a DVD.
iDVD	Get to know the iDVD window and controls and create your own DVD. You can create Hollywood-style DVDs to share your own movies, photos and music. Play these discs in most DVD players including computers with DVD drives.

*This course is FREE to all FirstTech TECHCARE customers
